

Bundlebees Usage Guide for Shopify

GETTING STARTED

This guide covers the full functionality of the Bundlebees app for Shopify. To install it, find Bundlebees in the Shopify App Store and click **Install**. Shopify shows you the permissions the app needs and the subscription you are approving, then opens the app inside your Shopify admin.

There is no separate Bundlebees account to register or log in to. Shopify signs you in, so the app opens straight to your bundles every time.

After the first install, you can open the app at any time from the left sidebar of your Shopify admin, under **Apps > bundlebees**.

The app has three pages, listed under its name in the sidebar:

- **Bundles** lists every bundle you have created.
- **Create Bundle** starts a new bundle.
- **Settings** controls where bundles appear on your storefront and the colors they use.

Shopify requires apps to follow its own admin design, so if you have used the BigCommerce version of Bundlebees, the Shopify version will look different. The five bundle types work the same way on both platforms.

BILLING

Bundlebees costs \$19.99 a month and every new install starts with a 15-day free trial, the same as the BigCommerce version. The subscription is billed through your Shopify account and shows up on your Shopify bill. You never enter a payment method inside the app, and there is no subscription or cancellation section in the app's Settings page. To manage or cancel the subscription, use the apps and billing pages of your Shopify admin.

BUNDLES SCREEN - FIRST LOOK

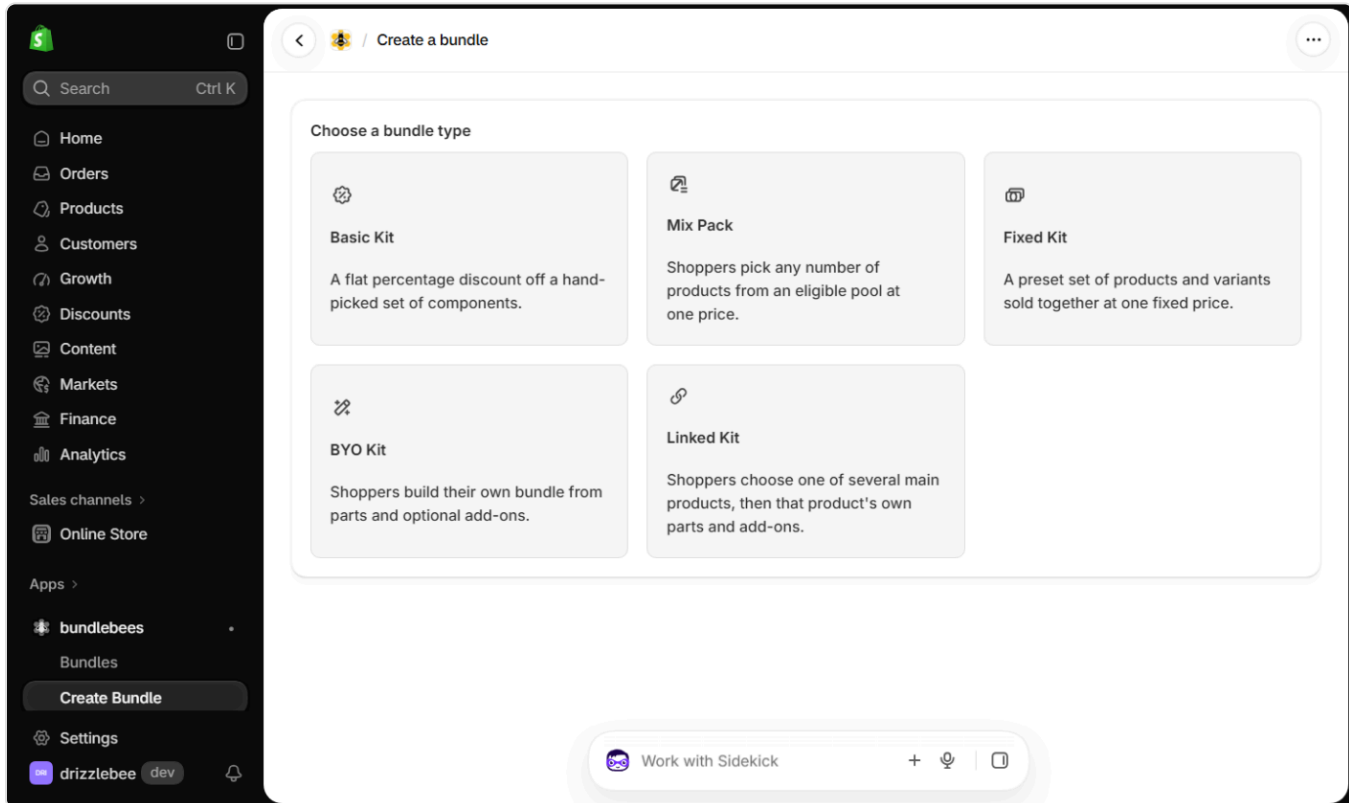

Clicking **Bundles** in the sidebar opens the Bundles screen. It lists every bundle you have created with its **Name**, **Kit type**, **SKU**, **Status** and the date it was **Last updated**, along with three actions per bundle. Those actions are covered in the Bundles Screen section further below.

Name	Kit type	SKU	Status	Last updated	Actions
drizzlebee Sweet Vs. Spicy Kit	BYO Kit	DRZLB-SSK	Active	Sep 24, 2026, 1:50 PM	Edit Disable Delete
drizzlebee Blazin' Glazes Inferno Kit	Fixed Kit	DRZLB-BGI	Active	Sep 24, 2026, 1:37 PM	Edit Disable Delete
drizzlebee Bake & Drizzle Sample Kit	Linked Kit	DRZLB-BDS	Active	Sep 23, 2026, 5:16 PM	Edit Disable Delete
drizzlebee Get Well Soon Bundle	Basic Kit	DRZLB-GWS	Active	Sep 21, 2026, 2:05 PM	Edit Disable Delete
drizzlebee Fruit Salad Mix Pack	Mix Pack	DRZLB-FSM	Active	Sep 21, 2026, 2:04 PM	Edit Disable Delete

To make a new bundle, click **Create bundle** in the top right corner of this screen, or **Create Bundle** in the sidebar.

CREATE A BUNDLE SCREEN

Creating a bundle starts with choosing its type. Each type is a card with a short description of how it works, and the card you click decides which form you fill in next.

A bundle's type can't be changed once the bundle is created, so pick the one that matches how you want shoppers to buy:

- **Basic Kit:** a flat percentage discount off a hand-picked set of products.
- **Mix Pack:** shoppers pick a set number of products from a pool, for one price.
- **Fixed Kit:** a preset set of products and variants sold together at one fixed price.
- **BYO Kit:** shoppers build their own bundle from parts and optional add-ons.
- **Linked Kit:** shoppers choose one of several main products, then that product's own parts and add-ons.

Fields every bundle has

Every bundle type starts with a **Bundle details** section. The first two inputs are the same for all five types.

Bundle details
Bundle name *

SKU *

Bundle name is the product name shoppers see on your storefront, and it's how the bundle shows up in the Products list of your Shopify admin. Choose a name that isn't already in use and clearly describes what the bundle contains.

SKU identifies the bundle inside the Bundlebees app, and it's also saved as the SKU on the bundle's product in Shopify. Use one that isn't already taken by another product. Both fields are required.

Every type also has a **Sales channels** section. Tick each Shopify sales channel the bundle should be sold on, such as Online Store, Shop or Point of Sale.

Sales channels
☒ Online Store
☐ Shop
☐ Point of Sale

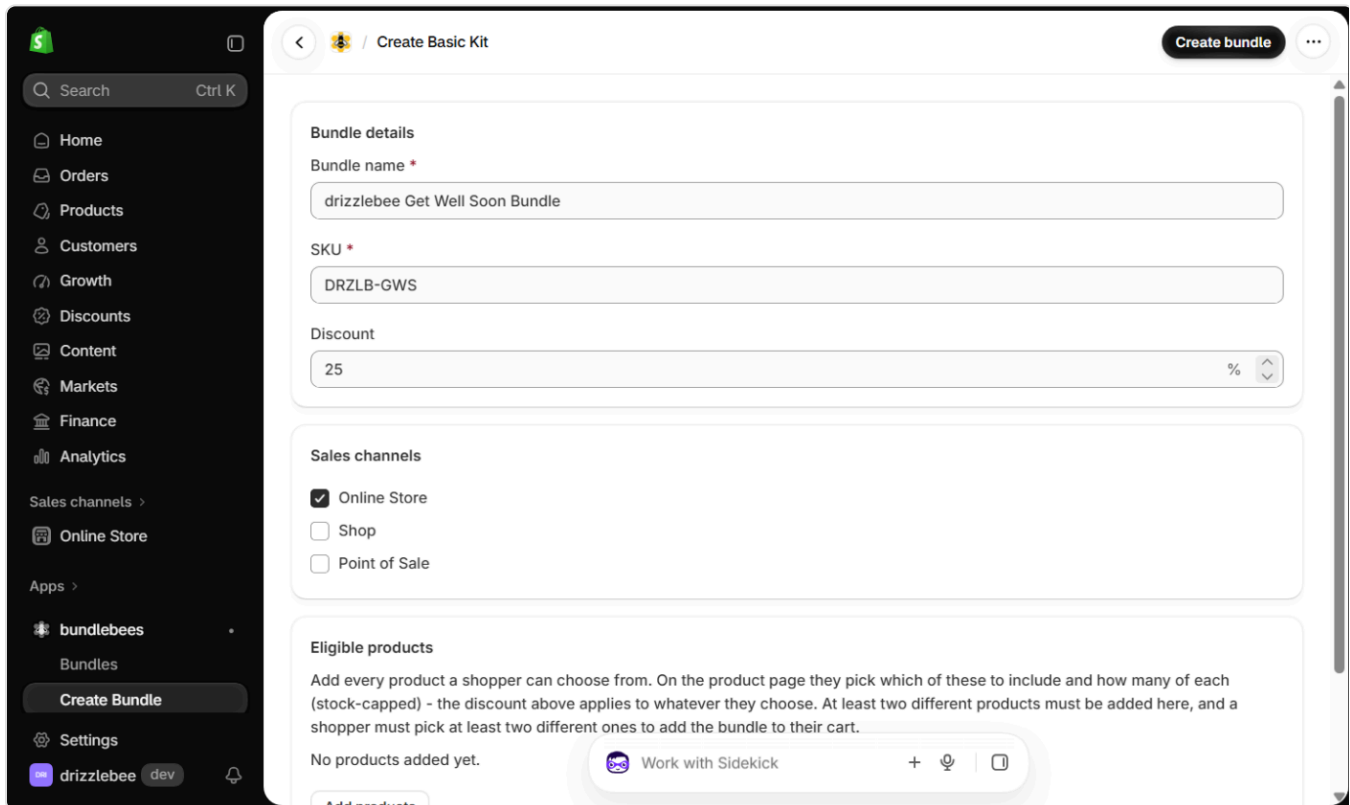

When the form is filled in, click **Create bundle** in the top right corner. Bundlebees creates the bundle as a product in your store. From the Products page of your Shopify admin you can then add images, a description and collections, just like any other product.

Create bundle

In your Products list, the bundle's product type shows as **Bundle with inventory not tracked**. Inventory tracking is off on purpose: stock is checked on the individual products inside the bundle, not on the bundle itself. Bundlebees manages the bundle's price, SKU, contents and sales channels, so change those in the app rather than on the product page.

Basic Kit

A Basic Kit groups a hand-picked set of products and takes a percentage off whatever the shopper chooses from it.

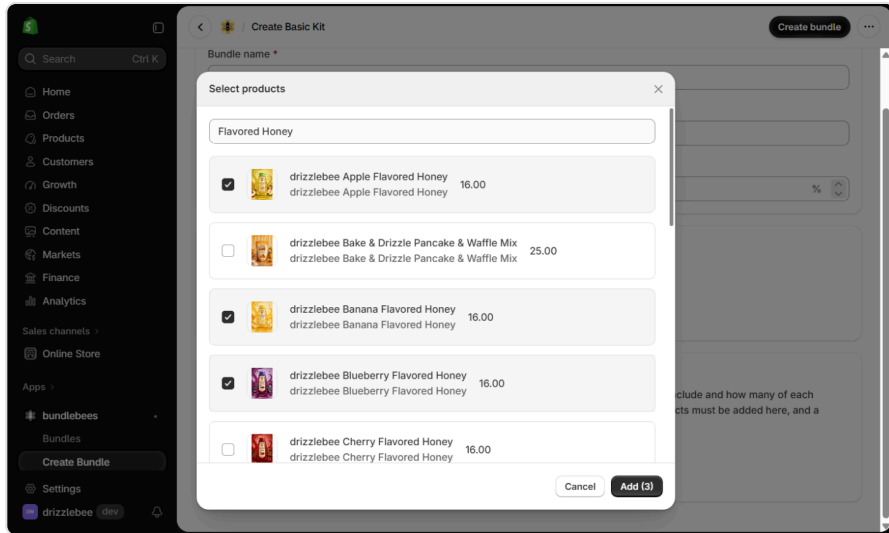

The screenshot shows the 'Create Basic Kit' screen in the Bundlebees app. On the left is a dark sidebar with navigation options: Home, Orders, Products, Customers, Growth, Discounts, Content, Markets, Finance, Analytics, Sales channels, Online Store, Apps, bundlebees, Bundles, Create Bundle (highlighted), Settings, and drizzlebee dev. The main content area has a top bar with a back arrow, a home icon, the title 'Create Basic Kit', a 'Create bundle' button, and a menu icon. The form is divided into three sections: 'Bundle details' with fields for 'Bundle name' (containing 'drizzlebee Get Well Soon Bundle'), 'SKU' (containing 'DRZLB-GWS'), and 'Discount' (containing '25' with a percentage selector); 'Sales channels' with checkboxes for 'Online Store' (checked), 'Shop', and 'Point of Sale'; and 'Eligible products' with instructions and an 'Add products' button. A 'Work with Sidekick' banner is at the bottom.

Below the name and SKU is **Discount**, the percentage taken off the products the shopper picks. It accepts whole numbers or decimals, such as 25 or 12.5, and you can leave it empty if you don't want a discount.

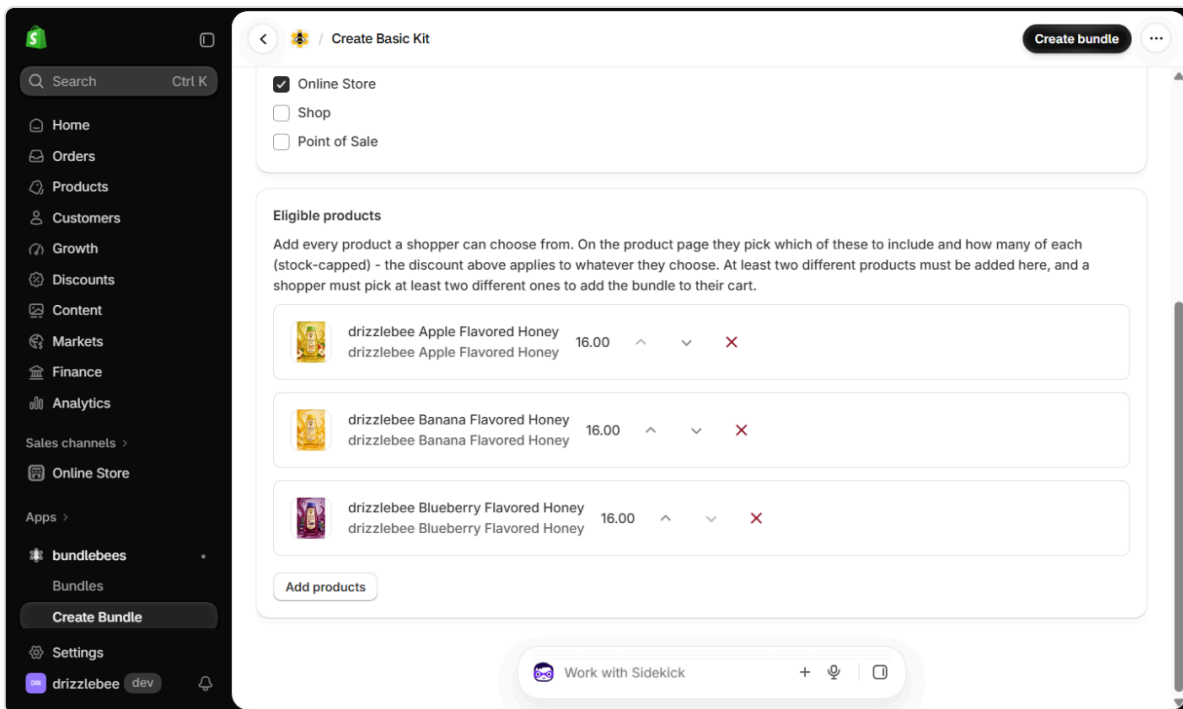

A close-up of the 'Discount' input field. It is a text box with the label 'Discount' above it. The text '25' is entered in the box. To the right of the text is a percentage symbol '%' and a small up/down arrow icon.

Under **Eligible products**, click **Add products**. The product picker opens with your catalog already loaded, so you can tick products straight away or type in the search box to narrow the list. Click **Add** when you're done.

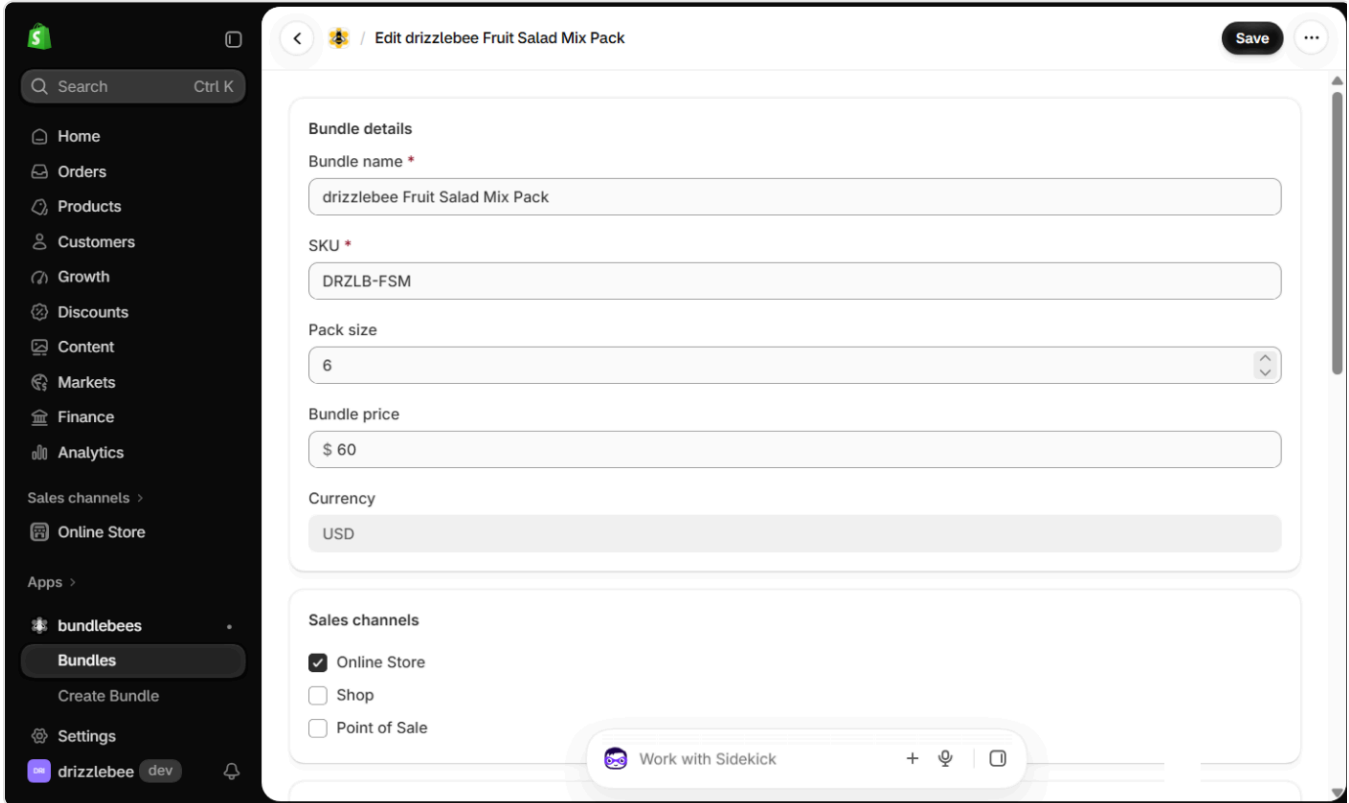

The products you picked appear in the Eligible products list with their price. Use the arrows to change their order and the red X to remove one.

A Basic Kit needs at least two different products. On the storefront, shoppers choose which of these products to include and how many of each, capped at what you have in stock, and they must pick at least two different products before they can add the bundle to their cart.

Mix Pack

A Mix Pack sells a set number of products for a set price. The shopper picks exactly that many products, in any mix, from a pool you choose.

Instead of a discount, a Mix Pack has three pricing fields:

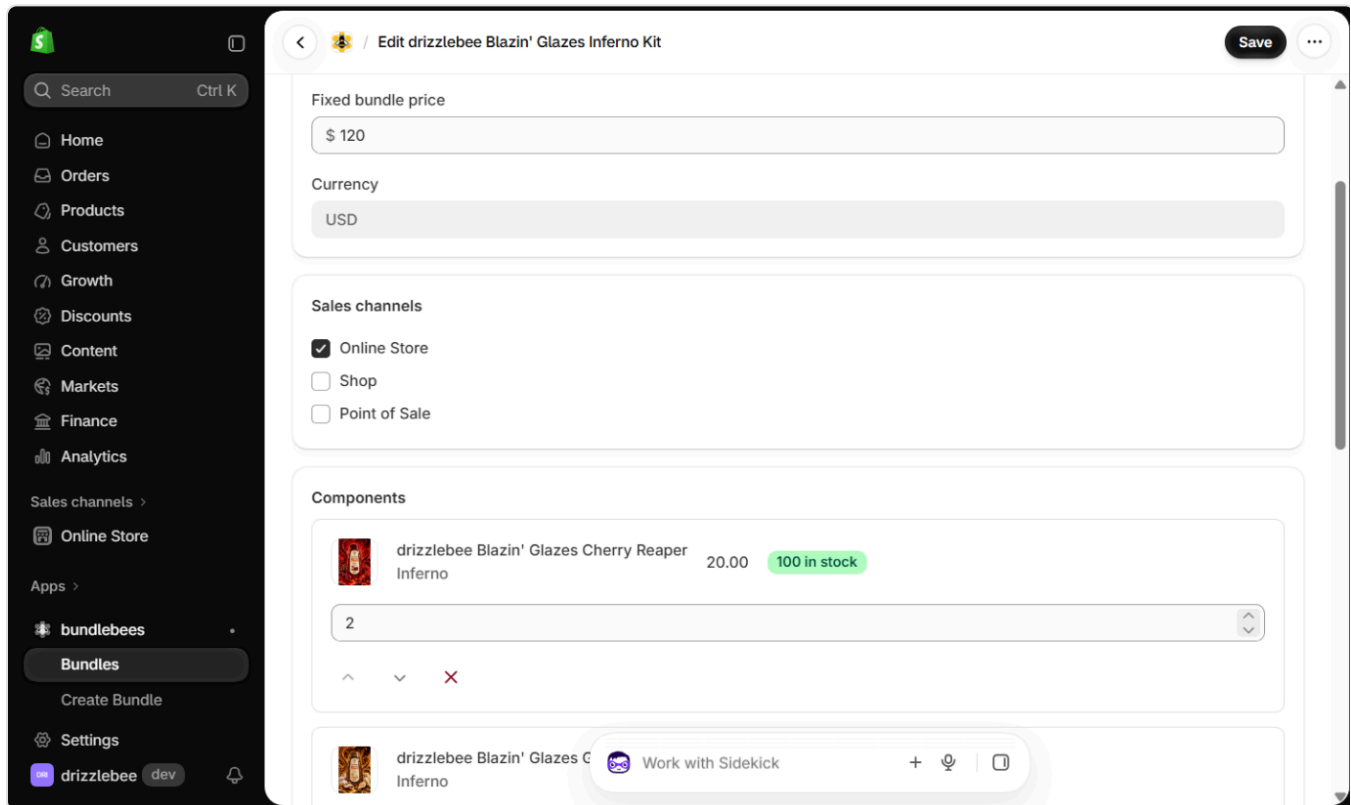

- **Pack size** is how many products the shopper must pick, no more and no less.
- **Bundle price** is what the shopper pays for the whole pack.
- **Currency** shows your store's currency. It's filled in for you and can't be changed here.

Under **Eligible pool**, click **Add products** and pick every product shoppers can choose from, using the same product picker as the Basic Kit. The pool must contain at least as many products as the pack size.

Fixed Kit

A Fixed Kit is a preset set of products and variants sold together at one price. Shoppers don't choose what goes in it.

Fixed bundle price is what the whole kit costs, and **Currency** shows your store's currency, the same as on the Mix Pack.

Under **Components**, click **Add products**. In the picker, each variant of a product is listed as its own row, so you choose the exact variant you want in the kit. The same product can be added more than once with different variants, like the Mild and Inferno versions of one sauce.

Each component then gets a quantity box. That's how many of the component go into the cart with every kit. Each component also shows how many are currently in stock.

What shoppers see: the Fixed Kit's product page shows the fixed bundle price and lists every component with its variant and quantity, so shoppers know exactly what's in the kit before they add it to the cart.

Build-Your-Own Kit

A Build-Your-Own (BYO) Kit lets a shopper put together a bundle from separate parts, rather than buying a single fixed set of products.

The **Bundle details** section has an optional **Bundle-wide discount**. Leave it empty for no discount, or enter a percentage. It applies to the fixed product and every part option. Add-ons are always priced separately.

Next is **Fixed product**. Turn on **Include a fixed product** if the kit has a base product that is always added to the cart alongside the shopper's choices, then click **Select a product**. Leave it off if the kit is made entirely of the shopper's own choices.

Fixed product

☐ Include a fixed product

Optional — enable this if the kit has a base product that's always added to the cart alongside the shopper's selections. It is optional for you to include, but not optional for the shopper once included: it is added to every purchase in the quantity set below at its current price, on top of the parts and add-ons the shopper chooses. The kit's own product page is separate and does not copy this product's description or images.

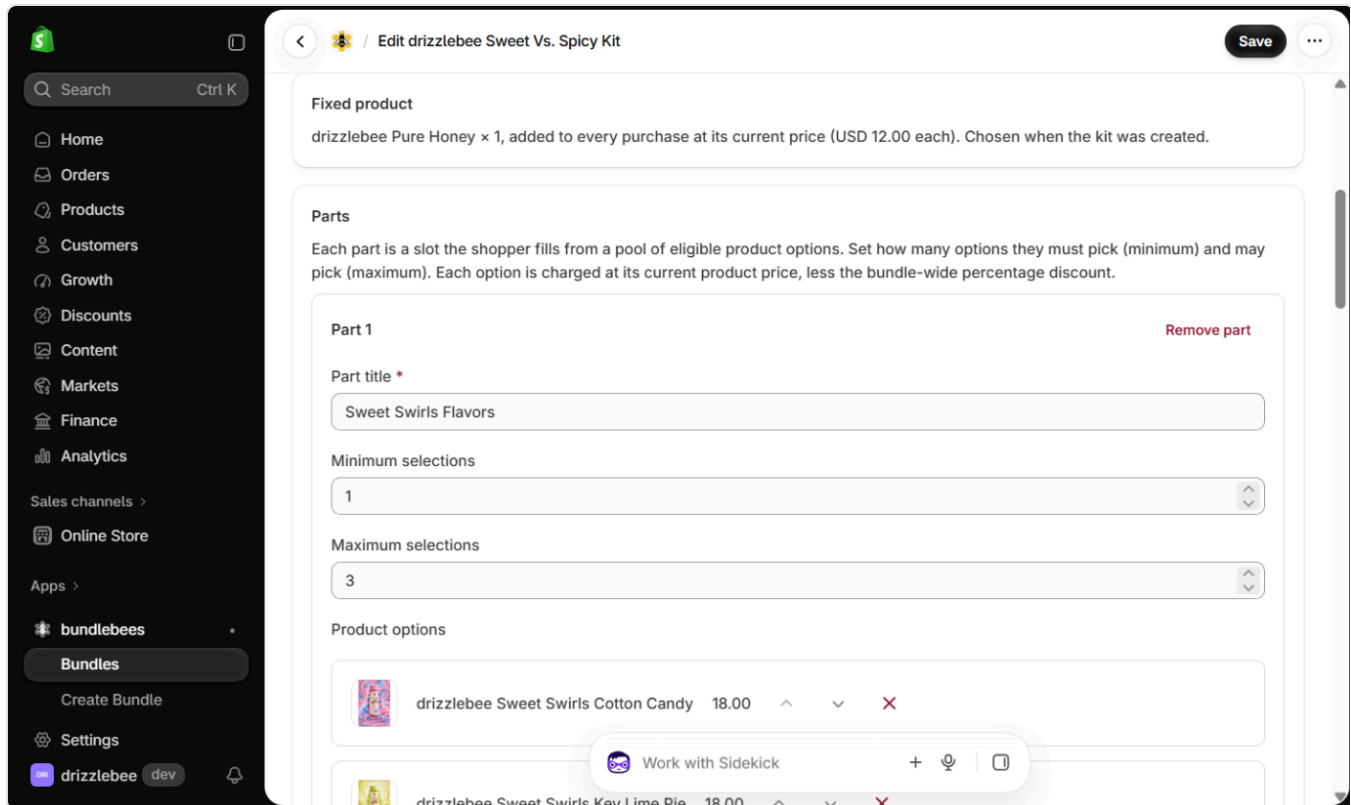

No fixed product selected yet.

Select a product

A BYO Kit can have only one fixed product. Once you pick it, a quantity box appears below it, set to 1 by default. That's how many of the fixed product go into the cart with every kit.

The fixed product is added to every purchase at its current price, on top of the parts and add-ons the shopper picks. The kit's own product page is separate, so it doesn't copy the fixed product's description or images.

A BYO Kit is built from **Parts**. A part isn't one product. It's a slot the shopper fills by picking from a set of product options you choose, so give it a title that describes the choice, like "Choose your Base" or "Sweet Swirls Flavors".

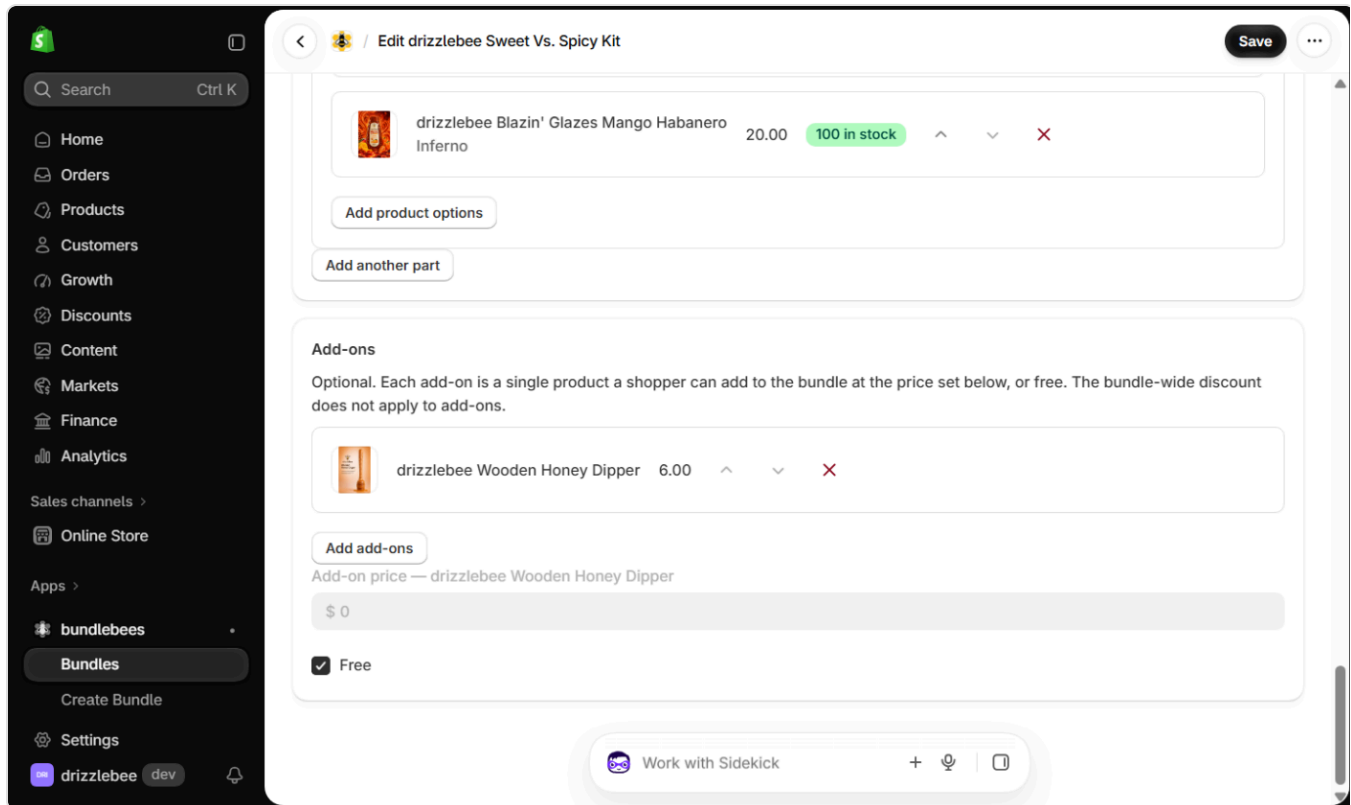

- **Part title** is the label shoppers see for this choice.
- **Minimum selections** is how many options the shopper must pick for this part.
- **Maximum selections** is the most options they may pick.
- **Add product options** opens the product picker so you can choose the products available in this part.

The minimum decides whether a part is required. With a minimum of 1 or more, shoppers must fill the part before they can add the kit to their cart, and the storefront marks it with an asterisk next to its title. Set the minimum to 0 to make the part optional so shoppers can skip it. The storefront also shows the range you set, such as "Choose 1 to 3".

Each option is charged at its current product price, less the bundle-wide discount. Click **Add another part** to add more slots to the kit, or **Remove part** to delete one.

Add-ons are optional extras a shopper can include with the kit. Each add-on is a single product rather than a slot with choices. Click **Add add-ons** to pick them, then set an **Add-on price** for each one, or tick **Free** to include it at no extra charge. The bundle-wide discount never applies to add-ons, and shoppers can always skip them.

What shoppers see: on the BYO Kit's product page, the fixed product appears under **Included** with its quantity. Each part shows its title and how many options to pick, like "Sweet Swirls Flavors, Choose 1 to 3", and shoppers set a quantity for each option they want.

Sweet Swirls Flavors * — Choose 1 to 3 ▲

drizzlebee Sweet Swirls Cotton Candy
\$18.00
0 ▲ ▼

drizzlebee Sweet Swirls Key Lime Pie
\$18.00
0 ▲ ▼

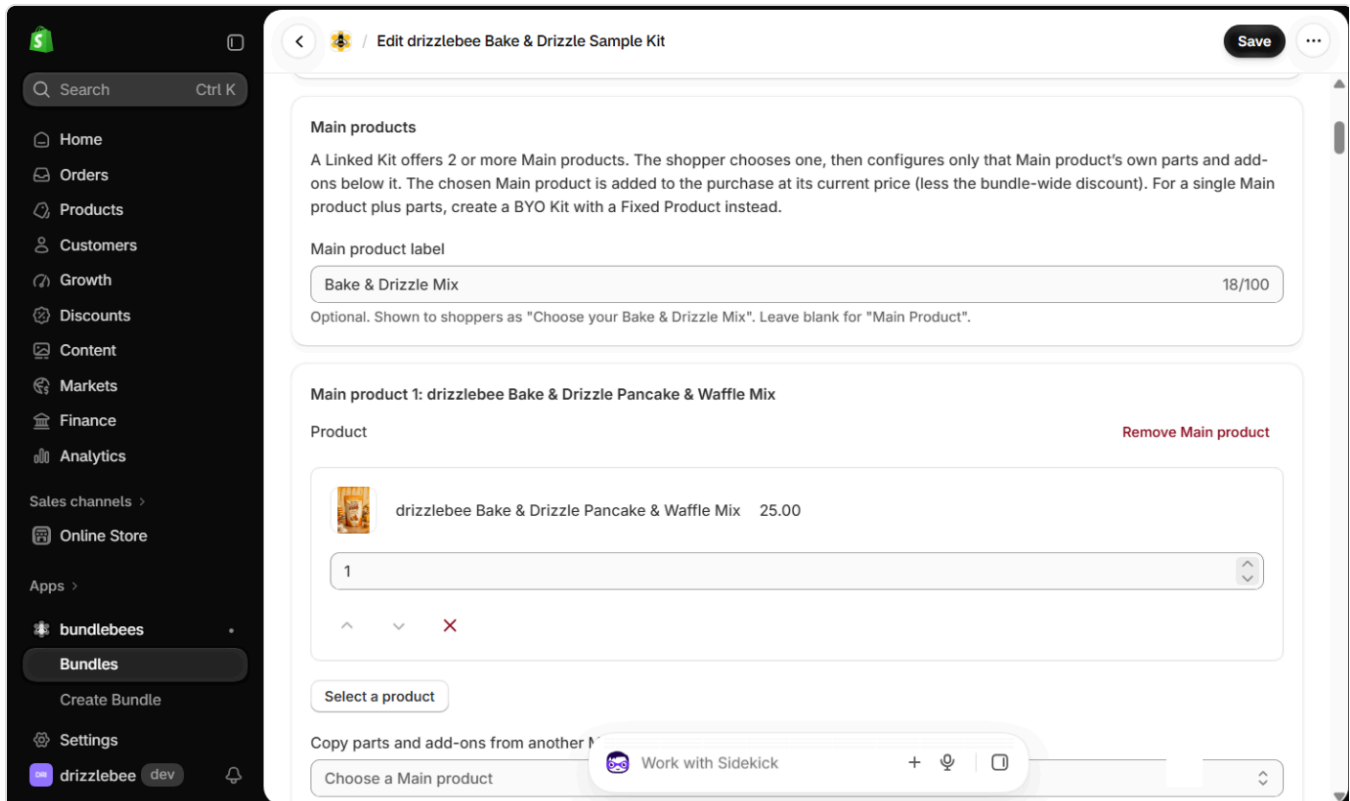

drizzlebee Sweet Swirls Lemon Meringue

Linked Kit

A Linked Kit is built around two or more **Main products**. The shopper chooses one, then configures only that main product's own parts and add-ons. Think of it as a small BYO Kit for each main product. It's the right choice when you offer several different starting products and each needs its own set of options.

If you only have one starting product, use a BYO Kit with a fixed product instead. A Linked Kit with a single main product makes the shopper click through a "Choose your..." step with nothing to choose.

The Bundle details section has the same optional **Bundle-wide discount** as the BYO Kit. It applies to the chosen main product and every part option.

Main product label controls how the main product choice is labeled for shoppers. Whatever you type is shown as "Choose your ____". For example, "Bake & Drizzle Mix" shows as "Choose your Bake & Drizzle Mix". Leave it blank and shoppers see "Choose your Main Product".

Main product label

Main Product

0/100

Optional. Shown to shoppers as "Choose your Main Product". Leave blank for "Main Product".

Select a product

Copy parts and add-ons from another Main product

Choose a Main product

⌵

Replaces this Main product's parts and add-ons with a copy you can then edit.

Copy

For each main product, click **Select a product** to choose it, then build its **Parts** and **Add-ons** exactly the way you would on a BYO Kit. Everything you add belongs only to that main product. A part called "Choose your Topping" under one main product has no connection to a part with the same name under another.

To save time on similar main products, use **Copy parts and add-ons from another Main product**. Choose a main product you've already built and click **Copy**. This replaces the current main product's parts and add-ons with a copy, which you can then edit. Copying only sets a starting point and doesn't link the two main products.

Click **Add another Main product** at the bottom of the form for each additional starting product. Make sure the kit has at least two main products before you click **Create bundle**.

What shoppers see: the main product label becomes the first choice on the product page, here "Choose your Bake & Drizzle Mix", with each main product listed below it. Once a shopper picks one, they fill in that main product's own parts, like Flavored Honeys.

BUNDLES SCREEN

Each row on the Bundles screen has three actions.

Actions		
Edit	Disable	Delete
Edit	Disable	Delete
Edit	Disable	Delete
Edit	Disable	Delete
Edit	Disable	Delete

Edit opens the Edit screen for that bundle, covered below.

Disable takes the bundle off your storefront without deleting it, which is handy for seasonal or time-limited offers. The bundle's status changes from **Active** to **Disabled**, and the action changes to **Enable**. Disabling also unpublishes the bundle's product from all of its sales channels, so shoppers can't find or buy it. Click **Enable** to put the bundle back on sale.

Delete removes the bundle permanently. This can't be undone, so if you might want the bundle again later, disable it instead.

Edit Bundle Screen

The Edit screen shows the same sections you filled in when you created the bundle, with your current values already in place. Change whatever you need and leave the rest. Products, parts, add-ons and main products can be added, reordered or removed the same way as on the create screen.

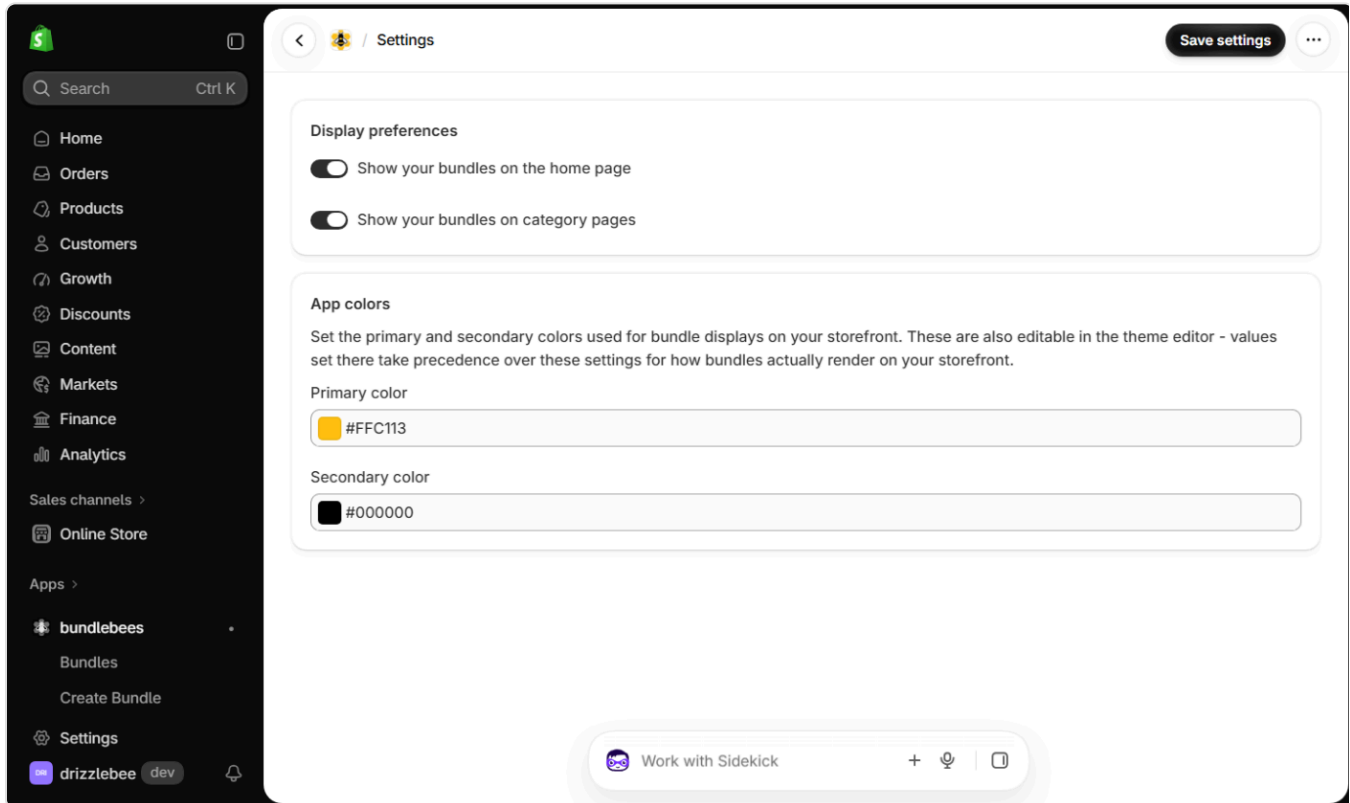

A screenshot of the Bundlebees web application interface. On the left is a dark sidebar with a search bar and a list of navigation items: Home, Orders, Products, Customers, Growth, Discounts, Content, Markets, Finance, Analytics, Sales channels, and Apps. Below these are 'bundlebees' and 'Bundles' sections, with 'Bundles' currently selected. The main content area is titled 'Edit drizzlebee Get Well Soon Bundle' and contains three sections: 'Bundle details' with fields for 'Bundle name' (drizzlebee Get Well Soon Bundle), 'SKU' (DRZLB-GWS), and 'Discount' (25%); 'Sales channels' with checkboxes for 'Online Store' (checked), 'Shop', and 'Point of Sale'; and 'Eligible products' with a descriptive text and a list of products, including 'drizzlebee Cinnamon Flavored Honey'. A 'Save' button is in the top right corner.

A bundle's type can't be changed from the Edit screen. When you're done, click **Save** in the top right corner to update the bundle.

SETTINGS SCREEN

Clicking **Settings** under bundlebees in the sidebar opens the Settings screen. It controls how bundles behave on the customer-facing side of your store.

Under **Display preferences** are two switches that control which pages show your bundles.

Show your bundles on the home page controls whether bundles appear on your storefront's home page. **Show your bundles on category pages** controls whether they appear on the collection pages they belong to.

Under **App colors** are the **Primary color** and **Secondary color** used for bundle displays on your storefront, so you can match your brand. Each takes a hex code and shows a preview swatch next to it.

App colors

Set the primary and secondary colors used for bundle displays on your storefront. These are also editable in the theme editor - values set there take precedence over these settings for how bundles actually render on your storefront.

Primary color

 #FFC113

Secondary color

 #000000

These colors can also be changed in the Shopify theme editor. If the two don't match, the theme editor values win, because that's what your storefront actually uses. Click **Save settings** in the top right corner to save your changes.

CONTACT US

For questions, comments or help with Bundlebees, visit bundlebees.app/contact-us.

Every bundle you create and enable is a product in your store, sold on the sales channels you ticked and shown on your home page and category pages if those settings are on. Shoppers make their choices right on the bundle's product page, and the prices, quantities and stock limits you set in the app are applied there.

Happy Bundling!
